BI-DIRECTIONAL RRT* IMPLEMENTATION REPORT

METHOD:

- Implemented all 3 variants of Bi-directional RRT* algorithm (Connect + Extend, Extend + Extend, Connect + Connect)
- Benchmarked the algorithm with the original RRT and RRT* algorithms.
- Ran all the algorithms for 10 instances and the results obtained have been reported below.

MAP:

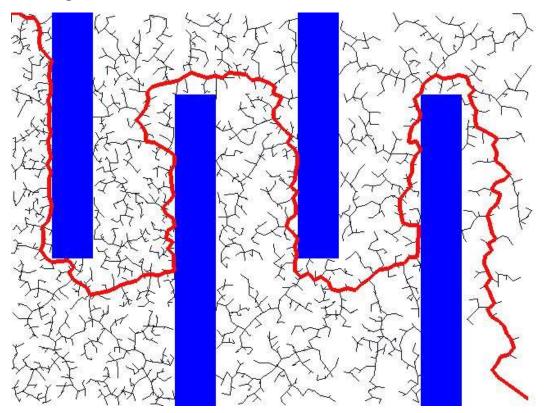

Start Node: [0,0] (Top-left Corner)

Goal Node: [630, 470] (Bottom-right Corner)

RESULTS:

RRT Algorithm

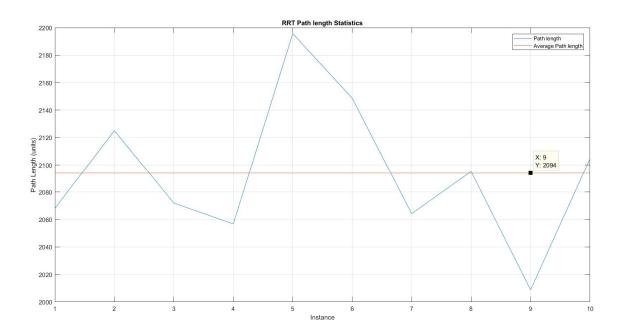

Statistics:

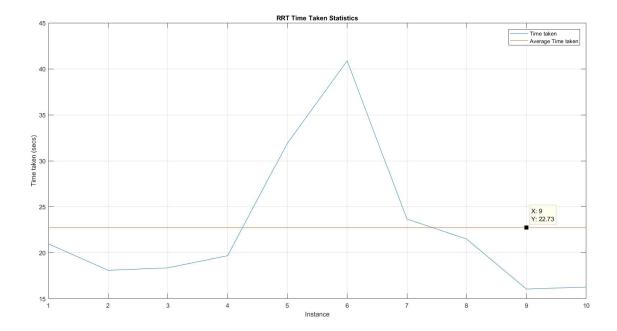

| Iteration | Path Length (units) | Time Taken (sec) |
|-----------|---------------------|------------------|
| 1 | 2068.05 | 20.96 |
| 2 | 2125.06 | 18.08 |
| 3 | 2071.97 | 18.35 |
| 4 | 2056.78 | 19.67 |
| 5 | 2195.69 | 31.93 |
| 6 | 2148.68 | 40.88 |
| 7 | 2064.25 | 23.65 |
| 8 | 2095.04 | 21.44 |
| 9 | 2008.78 | 16.05 |
| 10 | 2104.53 | 16.26 |

Average Path Length: 2093.88 units

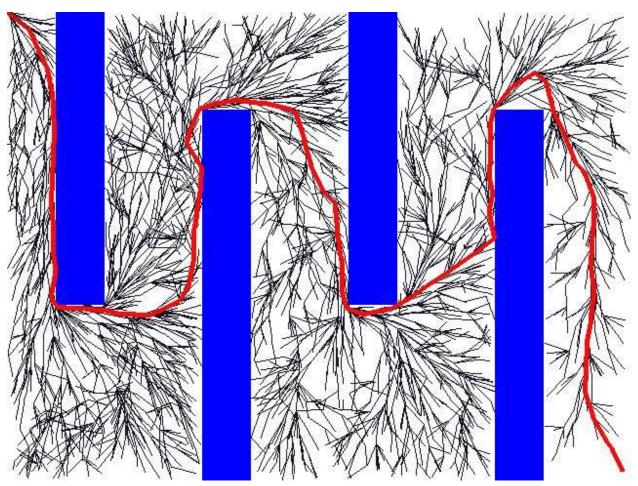

Average Time Taken: 22.73 sec

Path Length vs Iteration

RRT* Algorithm

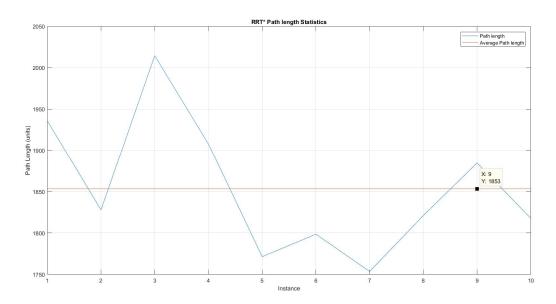

Statistics:

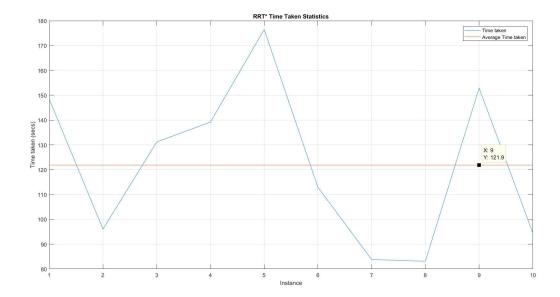

| Iteration | Path Length (units) | Time Taken (sec) |
|-----------|---------------------|------------------|
| 1 | 1936.06 | 148.41 |
| 2 | 1827.82 | 96.05 |
| 3 | 2014.57 | 131.18 |
| 4 | 1907.81 | 139.20 |
| 5 | 1771.44 | 176.50 |
| 6 | 1798.56 | 112.92 |
| 7 | 1753.60 | 83.81 |
| 8 | 1821.16 | 83.12 |
| 9 | 1884.58 | 152.90 |
| 10 | 1817.60 | 94.44 |

Average Path Length: 1853.32 units

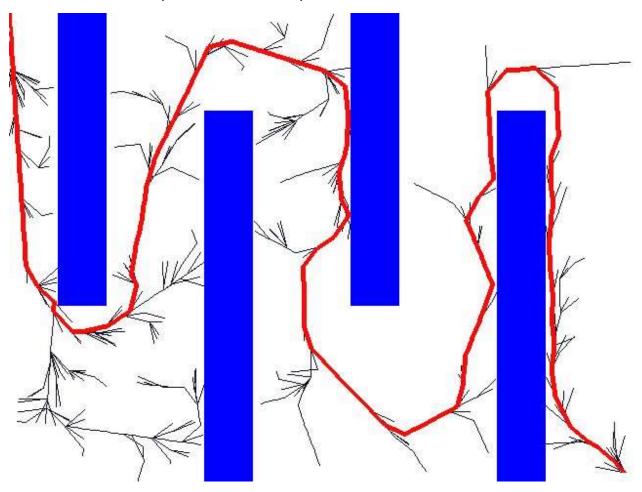

Average Time Taken: 121.85 sec

Path Length vs Iteration

Bi-directional RRT* (Connect + Extend)

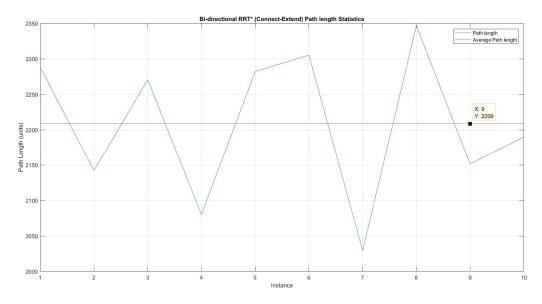

Statistics:

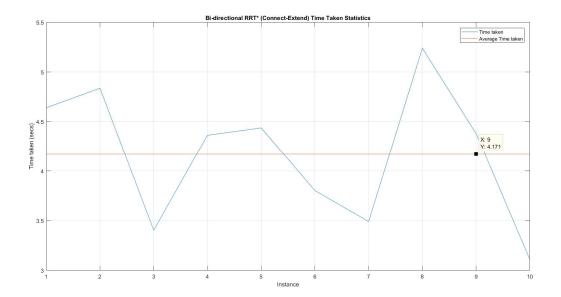

| Iteration | Path Length (units) | Time Taken (sec) |
|-----------|---------------------|------------------|
| 1 | 2288.13 | 4.64 |
| 2 | 2142.20 | 4.83 |
| 3 | 2270.64 | 3.40 |
| 4 | 2080.25 | 4.36 |
| 5 | 2282.11 | 4.43 |
| 6 | 2305.21 | 3.80 |
| 7 | 2029.39 | 3.49 |
| 8 | 2346.66 | 5.24 |
| 9 | 2151.43 | 4.38 |
| 10 | 2190.07 | 3.11 |

Average Path Length: 2208.60 units

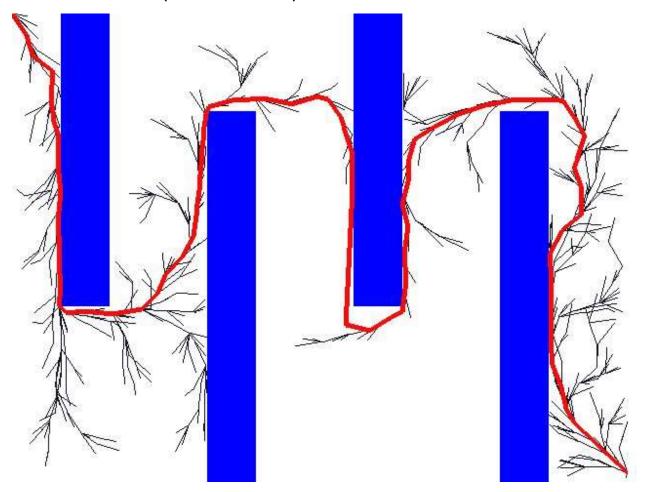

Average Time Taken: 4.17 sec

Path Length vs Iteration

Bi-directional RRT* (Extend + Extend)

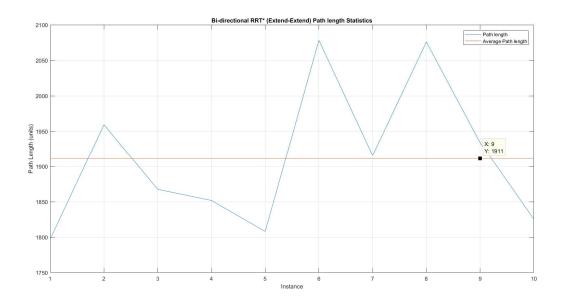

Statistics:

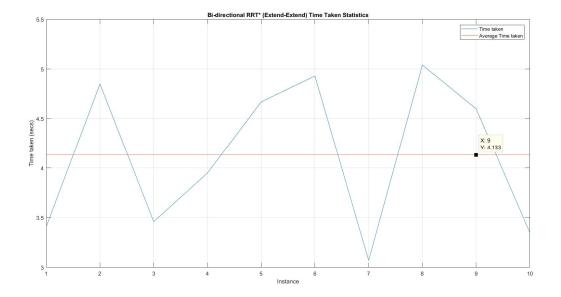

| Iteration | Path Length (units) | Time Taken (sec) |
|-----------|---------------------|------------------|
| 1 | 1797.31 | 3.41 |
| 2 | 1959.27 | 4.85 |
| 3 | 1867.58 | 3.46 |
| 4 | 1851.79 | 3.95 |
| 5 | 1808.02 | 4.67 |
| 6 | 2078.26 | 4.93 |
| 7 | 1915.76 | 3.07 |
| 8 | 2075.93 | 5.04 |
| 9 | 1933.91 | 4.60 |
| 10 | 1825.49 | 3.35 |

Average Path Length: 1911.33 units

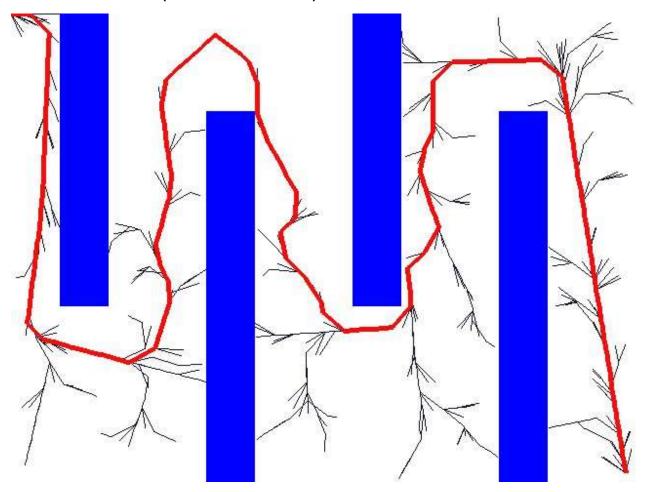

Average Time Taken: 4.13 sec

Path Length vs Iteration

Bi-directional RRT* (Connect + Connect)

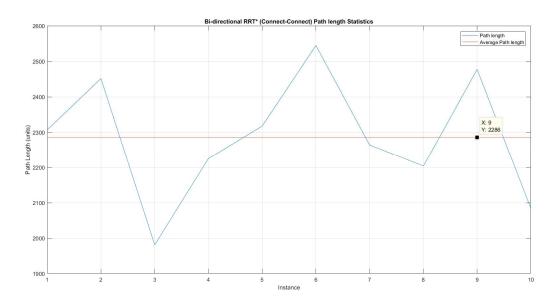

Statistics:

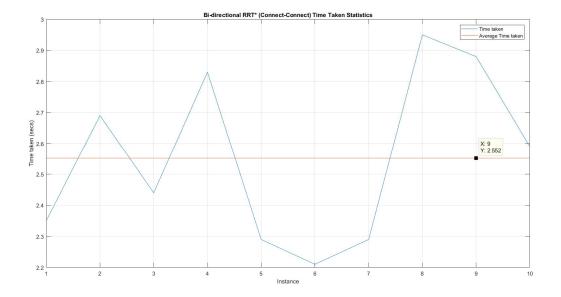

| Iteration | Path Length (units) | Time Taken (sec) |
|-----------|---------------------|------------------|
| 1 | 2307.16 | 2.35 |
| 2 | 2451.52 | 2.69 |
| 3 | 1980.94 | 2.44 |
| 4 | 2225.31 | 2.83 |
| 5 | 2317.80 | 2.29 |
| 6 | 2544.65 | 2.21 |
| 7 | 2264.24 | 2.29 |
| 8 | 2204.06 | 2.95 |
| 9 | 2477.39 | 2.88 |
| 10 | 2084.11 | 2.59 |

Average Path Length: 2285.71 units

Average Time Taken: 2.55 sec

Path Length vs Iteration

CONCLUSION:

- RRT finds the path in a reasonable amount of time but it is not a smooth path and not close to optimal path.
- RRT* finds the best path of all the variants (very close to optimal) but it takes forever to find one.
- Bi-directional RRT* (Connect + Connect) finds the path in the least time but it is very far from being optimal. This can be improved by reducing the step size but there will a trade-off on the time taken.
- Bi-directional RRT* (Extend + Extend) offers the best trade-off between time taken and path cost. The path found is close to the optimal path and it takes only about a few seconds to find a solution.
- Performance of Bi-directional RRT* (Connect + Extend) is somewhere in between the previous 2 variants.
